Key components of our research brief is the design, effectiveness and environmental benefits of living walls. Key areas of research include biodiversity, insulation, noise mitigation, water use and air pollution. We have begun a GIS mapping project for...

Living Walls | Green Roofs & Living Walls Centre

Green walls or living walls are part of Green Infrastructure in the urban realm when it comes to buildings. Climbers have been used as a self-regenerating cladding system for centuries. However, there are now modern techniques and processes that have taken the idea of planted walls to a whole new le...

Green walls are essentially a living cladding system

Green roofs can help regulate a building's internal temperature, reduce stormwater runoff, and mitigate the urban heat island effect. Green roofs offer significant economic benefits, including a longer roof life and heating and cooling energy savings. Green roofs also provide an opportunity for urban food production, and increasing urban biodiversity.

Fire performance of green roofs and walls - GOV.UK

Living walls keep growing in popularity, limited only by human creativity. A basic living wall is a plant such as ivy vines growing up the side of a building. A more complex living wall uses an engineered trellis system with plants rooted into a growing medium within the structure, but separate from the building.
