***The wave is the transfer of your hand's kinetic energy across the rope! Waves like this one—which require a medium to carry them—are known as mechanical waves. On the other hand, electromagnetic waves (such as visible light) do not need a medium to travel and therefore can travel in empty space.***

***A mechanical wave is the type of wave that needs a medium to be transmitted, as waves of this type do not travel through a vacuum. The quiz below is designed to test your basic understanding of mechanical waves. It will take less than a minute and is a true or false question. Give it a shot and see if you need more reading.***
