Probabilistic robotics is a new and growing area in robotics, concerned with perception and control in the face of uncertainty. Building on the field of mathematical statistics, probabilistic robotics endows robots with a new level of robustness in real-world situations.

Probabilistic Robotics

A general framework for constructing and using probabilistic models of complex systems that would enable a computer to use available information for

making decisions. Most tasks require a person or an automated system to reason—to reach conclusions based on available information. The framework of probabilistic graphical models, presented in this book, provides a general approach for this ...

I am reading Probabilistic Robotics and I don't know how to solve the exercise problem number 4 at the end of the second chapter. There are no solutions to this text. The exercise states: In this exercise we will apply Bayes rule to Gaussians. Suppose we are a mobile robot who lives on a long straight road.

Is robotics going statistics? The field of probabilistic robotics. S. Thrun. In the 1970s, most research in robotics presupposed the availability of exact models, of robots and their environments. Little emphasis was placed on sensing and the intrinsic limitations of modeling complex physical phenomena.
