The finite element method is applicable for the solution of all three categories of problems. It is a numerical procedure that replaces a continuous problem by an equivalent discrete one. The matrix notation is used in formulating and solving problems using the finite element procedure.

However, to indicate how the exercises in which a finite element program is to be used might be solved, we also include the solutions to three such exercises. For these studies, the computer programs ADINA (for structural analysis) and ADINA CFD (for fluid flow analysis) have been used. These finite element programs are part of the ADINA System, see
