Straightforward Visualization. Visualize data like you normally would, without thinking specifically about differences. This is the “let the data speak” route, which comes with its own challenges, but allows readers to make their own conclusions (because it forces them to).Or, you can annotate to direct readers where to go, which is usually the best option for presentation graphics.

Visualizing Differences | FlowingData

This is the most straightforward route, because you don’t have to change anything, geometrically speaking. Visualize the data how you normally would, and then annotate with lines, dots, words, etc. Pros. If the patterns are clear enough, you can provide a familiar view that takes less effort for someone to decipher.
